CORPS OF ENGINEERS TO LOCATE OLD TRENCHES OF FORMER LAREDO AFB

The U.S. Army Corps of Engineers will conduct a geophysical survey of certain Laredo neighborhoods May 20-23 in an attempt to locate old trenches that were once part of the former Laredo Air Force Base.

The survey is conducted by towing specialized equipment on a plastic trailer approximately 30 feet behind an All Terrain Vehicle (ATV). The survey requires the ATV to drive through the neighborhood streets only, so access to personal property is not necessary.

Because the survey equipment is sensitive to metal objects such as vehicles and bicycles, area residents are asked not to park on the street and to minimize travel in the area during the survey. Area 1, identified on the map, will have the survey done during daylight hours on May 20-21 and Area 2 will be completed on May 22 and 23.

For more information concerning the survey, please contact Ms. Lisa Lawson with the Corps of Engineers at 918-669-7551 or Mr. Jose Flores with the city of Laredo at 210-795-2000.

Editor's Note: If at all possible, please print the map with the above information.
