1-Methylphenanthrene	832-69-9		67.3	2.46 (S)	0.62	1.111
Dibenzothiophene	132-65-0	J	40.2	1.37 (S)	0.10	1.003

(1) Where applicable, custom lab flags have been used on this report; U = not detected at RL; K = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration; B = analyte found in the associated blank and concentration in sample is less than 10X the concentration in the associated blank; J = concentration less than lowest calibration equivalent.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = contract defined limit.
(3) May co-elute with Cyclopenta(cd)pyrene.
(4) May co-elute with Triphenylene.
(5) May co-elute with Dibenz[a,c]anthracene.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

BATCH SUMMARY

Batch ID: WG51242	***Date:*** 10-Jun-2015
Analysis Type: PAH	***Matrix Type:*** Tissue

BATCH MAKEUP

Contract: 4765

Samples:

L23191-2	83 Top
L23191-3	85 Middle
L23191-4	87 Bottom
L23191-8	95 Top
L23191-9	97 Middle
L23191-10	99 Bottom
L23191-14	125 Top
L23191-15	127 Middle
L23191-16	129 Bottom

Blank: WG51242-101

Reference or Spike: WG51242-102

Duplicate:

Comments:

1. Data are considered final.
2. Data are not blank corrected.
3. In sample 83 Top (Axys ID L23191-2), naphthalene, 2-methylnaphthalene, and 2,6-dimethylnaphthalene could not be quantified, as indicated by the NQ flags. The recovery of d8-acenaphthylene fell below the lower method control limit, as indicated by the V flag. The results are recovery corrected. The recovery of the d8-acenaphthylene is sufficient for the accurate quantification of native acenaphthylene and acenaphthene, the two analytes for which d8-acenapthylene is the internal standard.

(1) Where applicable, custom lab flags have been used on this report.
(2) QC limit is 20% for native compounds with a labeled analog, 35% for those without a labeled analog.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

(1) Where applicable, custom lab flags have been used on this report; U = not detected at RL; K = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration; B = analyte found in the associated blank and concentration in sample is less than 10X the concentration in the associated blank; J = concentration less than lowest calibration equivalent; NQ = data not quantifiable.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = contract defined limit.
(3) May co-elute with Cyclopenta(cd)pyrene.
(4) May co-elute with Triphenylene.
(5) May co-elute with Dibenz[a,c]anthracene.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

TBBPA	Tetrabromobisphenol A	AXYS MLA-079	MLA-079		Y																															

Note*
Analysis of pesticides and PCBs in non-potable water samples by AXYS method MLA-007, with the exception of NPDES or State permitted discharges and Stormwater applications, may fall within the scope of Washington State Department of Ecology solids matrix accreditation, subject to approval of the Ecology Project Manager.

Legend

BPA and mPE	Bisphenol A and mono-Phthalate Esters
HBCDD	Hexabromocyclododecane
OC Pesticides	Organochlorine Pesticides
PAH	Polycyclic Aromatic Hydrocarbons
PBDPE	Polybrominated diphenylethers
PCB	Polychlorinated Biphenyls
PCDDF	Polychlorinated dibenzodioxins/furans
PFC	Perfluorinated Compounds
PPCP	Pharmaceutical and Personal Care Products
TBBPA	Tetrabromobisphenol A
California DPH	California Department of Public Health, Lab ID 2911
Florida DOH	Florida Department of Health, Lab ID E871007, (NELAC Standard)
Pennsylvania DEP	Pennsylvania Departmnent of Environmental Protection
Minnesota DOH	Minnesota Department of Health, Lab ID 232-999-430, (NELAC Standard)
New Jersey DEP	New Jersey Department of Environmental Protection, Lab ID CANA005, (NELAC Standard)
New York DOH	New York Department of Health, Lab ID 11674, (NELAC Standard)
Washington DE	Washington Department of Ecology, Lab ID C404
Virginia DGS	Virginia Department of General Services, Division of Consolidated Laboratory Services, Lab ID 460224, (NELAC Standard)
Maine DOH	Maine Center for Disease Control and Prevention, Department of Health and Human Services, Lab ID CN00003
CALA	Canadian Association for Laboratory Accreditation Inc., Lab ID A2637, (ISO/IEC 17025:2005 Standard)
ANAB	ANSI-ASQ National Accreditation Board, certificate AT-1861, (ISO/IEC 17025:2005 Standard)

Highlands Ranch, CO, US, 80129

The AXYS contact for these data is Kirsten Anderson.

BATCH SUMMARY

Batch ID: WG51540	***Date:*** 21-Jul-2015
Analysis Type: PAH	***Matrix Type:*** Tissue

BATCH MAKEUP

Contract: 4765

Samples:

L23192-7	107 Top
L23192-8	109 Middle
L23192-9	111 Bottom
L23192-10	113 Top
L23192-11	115 Middle
L23192-12	117 Bottom
L23192-17	139 Middle
L23192-18	141 Bottom
L23192-19	143 Top
L23192-20	145 Middle
L23192-21	147 Bottom

Blank: WG51540-101

Reference or Spike: WG51540-102

Comments:

1. Data are considered final.
2. Data are not blank corrected.
3. The sample 137 Top (Axys ID L23192-16) was originally extracted in batch WG51540, but the analysis had to be repeated because of a laboratory mishap. The results for this sample will be reported separately from another batch.
4. The recovery of d12-2,6-dimethylnaphthalene in sample 115 Middle (Axys ID L223192-11) fell below the lower method control limit, as indicated by the V flag. The results are recovery corrected, and the impact on the data is not significant.

(1) Where applicable, custom lab flags have been used on this report.
(2) QC limit is 20% for native compounds with a labeled analog, 35% for those without a labeled analog.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

(1) Where applicable, custom lab flags have been used on this report; U = not detected at RL; K = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration; J = concentration less than lowest calibration equivalent.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = contract defined limit.
(3) May co-elute with Cyclopenta(cd)pyrene.
(4) May co-elute with Triphenylene.
(5) May co-elute with Dibenz[a,c]anthracene.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

TBBPA	Tetrabromobisphenol A	AXYS MLA-079	MLA-079		Y																															

Note*
Analysis of pesticides and PCBs in non-potable water samples by AXYS method MLA-007, with the exception of NPDES or State permitted discharges and Stormwater applications, may fall within the scope of Washington State Department of Ecology solids matrix accreditation, subject to approval of the Ecology Project Manager.

Legend

BPA and mPE	Bisphenol A and mono-Phthalate Esters
HBCDD	Hexabromocyclododecane
OC Pesticides	Organochlorine Pesticides
PAH	Polycyclic Aromatic Hydrocarbons
PBDPE	Polybrominated diphenylethers
PCB	Polychlorinated Biphenyls
PCDDF	Polychlorinated dibenzodioxins/furans
PFC	Perfluorinated Compounds
PPCP	Pharmaceutical and Personal Care Products
TBBPA	Tetrabromobisphenol A
California DPH	California Department of Public Health, Lab ID 2911
Florida DOH	Florida Department of Health, Lab ID E871007, (NELAC Standard)
Pennsylvania DEP	Pennsylvania Departmnent of Environmental Protection
Minnesota DOH	Minnesota Department of Health, Lab ID 232-999-430, (NELAC Standard)
New Jersey DEP	New Jersey Department of Environmental Protection, Lab ID CANA005, (NELAC Standard)
New York DOH	New York Department of Health, Lab ID 11674, (NELAC Standard)
Washington DE	Washington Department of Ecology, Lab ID C404
Virginia DGS	Virginia Department of General Services, Division of Consolidated Laboratory Services, Lab ID 460224, (NELAC Standard)
Maine DOH	Maine Center for Disease Control and Prevention, Department of Health and Human Services, Lab ID CN00003
CALA	Canadian Association for Laboratory Accreditation Inc., Lab ID A2637, (ISO/IEC 17025:2005 Standard)
ANAB	ANSI-ASQ National Accreditation Board, certificate AT-1861, (ISO/IEC 17025:2005 Standard)

(1) Where applicable, custom lab flags have been used on this report.
(2) QC limit is 20% for native compounds with a labeled analog, 35% for those without a labeled analog.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

(1) Where applicable, custom lab flags have been used on this report; U = not detected at RL; K = peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration; J = concentration less than lowest calibration equivalent.
(2) Reporting Limit (Code): S = sample detection limit; M = method detection limit; L = lowest calibration level equivalent; Q = contract defined limit.
(3) May co-elute with Cyclopenta(cd)pyrene.
(4) May co-elute with Triphenylene.
(5) May co-elute with Dibenz[a,c]anthracene.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

NARRATIVE

This narrative describes the analysis of eighteen urine samples for selected hydroxy metabolites of poly aromatic hydrocarbons (PAHs) using high-resolution gas chromatography / high-resolution mass spectrometry (HRGC / HRMS).

SAMPLE RECEIPT and STORAGE

The samples were received on the 2nd April 2015 and the 29th May 2015. Details of sample conditions on receipt are provided on the sample receiving record. As per instructions from ARCADIS: Day 7 urine sample for each test group was combined with the Day 8 urine sample for each test group. The combined urine samples were assigned AXYS ID L23367-1 to -24. Similarly, Day 14 urine sample for each test group was also combined with the Day 15 urine sample for each test group. The combined urine samples were assigned AXYS ID L23368-1 to -24. Sample compositing was conducted in workgroup WG51568 details of sample compositing are recorded on Composite Sample Preparation Record worksheets.

SAMPLE PREPARATION AND ANALYSIS

Analysis procedures were in general accordance with '**AXYS Method 905 Rev 01: *Analytical Procedure for the Analysis of Hydroxy-Polycyclic Aromatic Hydrocarbons in Urine by HRCG-HRMS.*** A method summary (MSU-905) is included in the data package following this narrative.

The samples were analyzed in batch WG51611, the composition of which is shown on the correlation table, and on the batch list heading the extraction workup sheets. The analysis batch included a procedural blank, (AXYS ID WG51611-104) prepared with synthetic urine and an Ongoing Precision and Recovery (OPRs) test sample (AXYS ID WG51611-102) prepared with spiked human urine.

An accurately measured sub-sample of approximately 4 mL sample was spiked with 30 µL of 2-mercaptoethanol to control analyte oxidation. The samples were then spiked with isotopically labeled quantification standards and β-glucuronidase enzyme. The mixture was incubated at 37°C for 17 hrs. The de-conjugated analytes were then extracted with pentane. The extracts were reduced under a gentle stream of nitrogen, spiked with the derivatization monitoring standard and the recovery standard and derivatized for 30 min with MSTFA at 60°C. The final extract volume was 225 µL, 2 µL was injected onto the HRGC/HRMS.

CALCULATIONS

Target concentrations were determined by isotope dilution or internal standard quantification procedures, using OPUSQuan software. Formulas used for conversion of the raw chromatographic data to concentrations are provided in the method summary document, MSU-905.

As described in the method summary, sample specific detection limits (SDLs) were calculated from the noise for each target analyte and used as the detection qualifier. If the OPUSquan software selected an unrepresentative region of noise for the SDL calculation, the SDL is corrected by hand on the raw data.

REPORTING CONVENTIONS

For internal tracking, ARCADIS U.S., INC., was assigned contract number 4765. AXYS logged the samples under the unique laboratory identifier of the form identifier of the form LXXXXX-XX All data reports reference both the client and lab sample identifiers.

Any extra work required and performed after the initial instrumental analysis of a sample extract is given an extra "test suffix" code. The single letter code per extra work performed is added to the AXYS sample ID as a suffix, and is combined with any other applicable test suffix codes. Test code in this data package includes:

i = Instrumental reanalysis of the sample extract
W = The sample extract was diluted and instrumentally reanalyzed

The laboratory qualifiers used are as follows:

D	=	indicates dilution data
K	=	peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration
U	=	Analyte not detected
V	=	the recovery of the surrogate falls outside the method control limits

Results are reported to three significant figures, in units of picograms per milliliter (pg/mL).

ANALYTICAL DISCUSSION

The glass centrifuge tube containing the laboratory blank (AXYS ID WG51611-101) was broken on 23-June-2015 during centrifugation. A second laboratory blank (AXYS ID WG51611-104) was restarted on 24-June-2015 and was processed along with the rest of the samples. This procedural blank was considered to represent laboratory background levels during the time of processing of samples reported in this workgroup.

Initial calibration did not meet all the method's specifications during the original analysis of the following sample extracts. The sample extracts were instrumentally reanalyzed twice and results were reported from the second reanalysis data. This is indicated on the report forms by suffix 'i2' added to the AXYS ID.

AXYS ID	Client ID
L22965-49	Day 14 Group 1
L22965-50	Day 14 Group 2
L22965-51	Day 14 Group 3
Lab Blank	WG51611-104

The area responses for one or more analytes in the following samples were over the method's calibration limit for 3-OH-Benzo[a]pyrene and / or 9-OH-Benzo[a]pyrene. The sample extracts were diluted and reanalyzed and the affected analytes were separately reported from the diluted extract analysis data. This is indicated by suffix 'W' added to the AXYS ID.

AXYS ID	Client ID
L23367-3	201 Day 7/8
L23367-4	202 Day 7/8
L23367-7	401 Day 7/8
L23367-8	402 Day 7/8

To reduce matrix interferences and bring some analytes within the method calibration limit the following samples were diluted and reanalyzed twice. Final data are reported from the diluted and instrumentally reanalyzed analysis data. This is indicated by suffix 'Wi2' added to the AXYS ID.

AXYS ID	Client ID
L22965-21	Day 7 Group 1
L22965-22	Day 7 Group 2
L22965-23	Day 7 Group 3
L22965-24	Day 7 Group 4
L22965-52	Day 14 Group 4
L23367-9	501 Day 7/8
L23367-10	502 Day 7/8
OPR	WG51611-102

Due to a software limitation, data points for all the initial calibration runs could not be included on the HTML reports. As a result the mean RRF values shown on the report forms are slightly different from the mean values shown on the raw data under the Analysis Chromatographic section. For all calculations, please use average RRF values shown on the Analysis Chromatography section of the data package.

QA/QC NOTES

The QC samples were prepared alongside the client sample, and were subjected to the same analytical procedures. The sample results were evaluated in comparison to the QC samples.

- The results are not blank corrected. The sample data should be compared to the procedural blank.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and cleanup.
- All linearity, CAL/VER, Lab Blank, OPR and labeled compound recovery specifications were met, with the following exception:

Due to matrix co-extractives elevated detection limits were observed for 3-OH-Chrysene and 3-OH-Benz[a]anthracene in some samples.

Percent recovery value for 13C6-3-OH-Chrysene was marginally below the method control limit in the Ongoing Precision and Recovery (OPR) test sample (AXY SID WG51611-102). However, quantitative recovery of all the native analytes in this QC sample demonstrated that data are not affected by this variance.

Percent recovery value for d11-3-OH-Benzo[a]pyrene was marginally above the method's control limit in sample Day 7 Group 3 (AXYS ID L22965-23). This has no impact on the data. The results are recovery-corrected, labeled compound recovery values are provided as general data quality indicators only.

DATA PACKAGE

This data package, assigned a unique identifier DPWG52227, includes: shown on the front page of this Data Package. Included in the data package after the narrative are the following documentations:

- Method summary, MSU-905
- Sample Correlation Table
- Sample Receiving Documentation
- Composite Sample Preparation Records
- Extraction worksheets.

- Sample data reports (Analysis Reports)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Sample raw data (Analysis chromatography)
- Laboratory QC raw data
- Instrumental QC raw data (organized by analysis date).

I certify that this data package complies with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of Axys Analytical Services Ltd, authorizes the release of the data contained in this data package.

Summary of AXYS method MLA-905 Rev. 01 Ver. 02:

ANALYTICAL PROCEDURE FOR THE ANALYSIS OF HYDROXY-POLYCYCLIC AROMATIC HYDROCARBONS IN URINE BY HRGC-HRMS

AXYS Method MLA-905 describes the determination of concentrations of selected hydroxy-polyaromatic hydrocarbons (OH-PAHs) in urine samples. According to clients' requests this analysis may be performed to determine total OH-PAHs (the sum of free OH-PAHs and conjugated OH-PAHs) and/or only free (not conjugated) OH-PAHs. Deconjugation is performed by enzymatic hydrolysis to liberate the glucuronated and sulfonated forms of the analytes into free hydroxy PAH forms.

Typical reporting limits are 10 - 25 pg /mL for each analyte using a 4 mL sample.

TARGET ANALYTES

Hydroxy polycyclic aromatic hydrocarbons (OH-PAHs)

Compound	Short name	CAS #
3-Hydroxy-chrysene	3-OH-Chrysene	63019-39-6
3-Hydroxy-benzo[a]pyrene	3-OH-Benzo[a]pyrene	13345-21-6
9-Hydroxy-benzo[a]pyrene	9-OH-Benzo[a]pyrene	17573-21-6
3-Hydroxy-benz[a]anthracene	3-OH-Benz[a]anthracene	4834-35-9
7,8-Dihydrodiol-benzo[a]pyrene (trans) *	7,8-Diol-benzo[a]pyrene, trans	60864-95-1
7,8-Dihydrodiol-benzo[a]pyrene (cis) *	7,8-Diol-benzo[a]pyrene, cis	60657-25-2

* Poorly recovered analyte, included for general information only

EXTRACTION

Urine samples are spiked with 2-mercaptoethanol to prevent oxidation of the analytes. The samples are then spiked with a suite of labeled quantification standards and labeled derivatization monitoring standard. Where total OH-PAHs (the sum of free OH-PAHs and conjugated OH-PAHs) are required β-glucuronidase enzyme is used to de-conjugate the glucuronated and sulfonated forms of the analytes into free hydroxy PAH forms. The samples are then sequentially extracted with pentane. The extracts are dried with anhydrous sodium sulphate, concentrated and derivatized to trimethylsilyl forms with N-Methyl-N-(trimethylsilyl) trifluoroacetamide.

INSTRUMENTAL ANALYSIS

Instrumental analysis is performed by high-resolution gas chromatography using a 30 m DB-17 capillary column and detection by high resolution mass spectrometry.

Analytes, Typical Retention Times, Acquired Ions and Quantification References

Target Analyte	Typical Retention Time (mm:ss)	Mass 1	Mass 2	Quantified Against
Target Analytes

$^{13}C_{12}$-PCB-81	16:18	301.9626	303.9597	External standard

CALIBRATION

Initial calibration is performed using a five point calibration series of solutions that encompass the working concentration range. The derivatized initial calibration solutions contain authentic target OH-PAHs, deconjugation monitoring standards, and ^{13}C-labelled or deuterium labelled derivatization monitoring, surrogate and recovery standards. The concentrations of the authentic target compounds in the solutions vary to encompass the working range of the instrument, while the concentrations of the other compounds are constant. Calibration procedures use the mean RRFs determined from the initial calibration to calculate analyte concentrations. Calibration is verified at least once every 12 hours by analysis of a mid-level calibration solution.

Nominal Concentrations of Calibration Standard Solutions

Target analyte	CAL A CS-1	CAL B CS-2	CAL C CS-3	CAL D CS-4	CAL E CS-5	CAL F CAL VER CS-6	CAL G CS-7	CAL H CS-8

ANALYTE IDENTIFICATION

An individual chromatographic peak is identified as a target compound if the following criteria are met for the quantification and confirmation ions:

1. Peak responses must be at least three times the background noise level for the quantification mass ion.
2. Each analyte is identified with one quantification and one confirmation mass ion.
3. The relative retention time must be within the window predicted from the initial calibration runs and the surrogate standard retention times.
4. Peak maxima for quantification and confirmation ions must coincide within two seconds.

QUANTIFICATION

Target concentrations are determined by isotope dilution or internal standard quantification procedures using MassLynx software. The equation used in the conversion of the raw chromatograms to concentration is provided below:

$$\text{Sample Conc.} = \left(\frac{\text{area of Target}}{\text{area of Surro}} \times \text{weight of Surro. (ng)}\right) x \left(\frac{1}{RRF_X}\right) x \left(\frac{1}{\text{sample size (mL)}}\right),$$

where RRF_x = Relative Response Factor for the analyte. RRFs are calculated for each analyte according to the following equation:

$$RRF_x = \left(\frac{A_x}{A_{IS}}\right) \times \left(\frac{C_{IS}}{C_x}\right)$$

where: C_{IS} =The concentration of the quantification standard in the calibration standard.
C_x =The concentration of the target analyte in the calibration standard.

Final target concentrations are recovery corrected by this method of quantification.

The recovery of the surrogate standard is calculated (by internal standard quantification against the recovery standard using an average RRF) and monitored as an indication of overall data quality.

$$\text{\% Surrogate recovery} = \left(\frac{\text{area of Surrogate}}{\text{area of Recovery Std}} \times \frac{\text{Weight of Rec. Std}}{\text{Weight of Surro.}}\right) x \left(\frac{100}{RRF}\right)$$

REPORTING CRITERIA

Sample specific detection limits (SDLs) are calculated by TargetLynx software using 3 times the signal of the noise in the target channel converted to an equivalent sample concentration:

$$SDL = \left(\frac{3 \text{ x Height of Noise}}{\text{Height of Surro}} \times \text{weight of Surro (ng)}\right) x \left(\frac{1}{RRF_X}\right) x \left(\frac{1}{\text{sample size (mL)}}\right)$$

SDLs values are used as a detection qualifier. Final concentrations may be reported as picograms per milliliter (pg/mL) or picograms per gram (pg/g). The units to be used for a given project have to be negotiated at the start of every project.

QUALITY ASSURANCE/QUALITY CONTROL

All samples are analyzed in batches with the following composition:

- Batch Size – Each batch consists of test samples and additional QC samples.
- Blanks – Blanks are analyzed with a minimum frequency of 5% of client samples (i.e. each batch of up to 20 client samples contains a procedural blank). A laboratory prepared pooled urine verified for use, e.g., reference urine SC6235 or synthetic urine, is used as the matrix for the laboratory blank. The laboratory blank is also spiked with the de-conjugation monitoring standard.
- Duplicates – Where sufficient sample is available a duplicate sample is normally analyzed with each analysis batch containing greater than six (6) test samples, or as required by contract.
- OPR (Ongoing Precision and Recovery) – OPRs are analyzed with a minimum frequency of 5% of client samples (i.e. each batch of up to 20 client samples contains an OPR.) An aliquot of native standard (typically 10 µL equivalent to 20 ng per analyte) is added to 4 mL of an approved reference urine matrix to prepare the spiked reference sample. The OPR is also spiked with the de-conjugation monitoring standard.
- A Matrix Spike/Matrix Spike Duplicate may be analyzed upon client request.
- Surrogate/Authentic/Recovery (SAR) solution – Standards for OH-PAHs degrade fairly rapidly. As a diagnostic tool of standards stability control SAR must be prepared with each analysis batch and evaluated.

The batch composition may vary according to batch or quality control requirements specified by a client. Each batch is carried through the complete analytical process as a unit. For sample data to be reportable the batch QC data must meet the acceptance criteria.

QC Specification Table: Procedural Blank Levels and OPR Recoveries

Analyte	Procedural Blank Level pg/sample [1]	Acceptable OPR (% Recovery) [2]
3-OH-Chrysene	100	70-130
3-OH-Benzo[a]pyrene	100	70-130
9-OH-Benzo[a]pyrene	100	60-140
3-OH-Benz[a]anthracene	100	70-130
7,8-Diol-benzo[a]pyrene, Cis *	100	N/A
7,8-Diol-benzo[a]pyrene, Trans *	100	N/A
De-conjugation monitoring standards		
1-OH-Naphthalene	100	50-150
1-OH-Pyrene	100	50-150
Surrogate standards		
$^{13}C_6$-3-OH-Chrysene	50-150	50-150
$^{13}C_6$-1-OH-Benz[a]anthracene	50-150	50-150
d_{11}-3-OH-Benzo[a]pyrene	20-120	20-120
$^{13}C_6$-1-OH-Naphthalene	20-120	20-120
$^{13}C_6$-1-OH-Pyrene	20-120	20-120
Derivatization monitoring standard		
$^{13}C_{12}$-4'-OH-3,3',4,5'-TetraCB	60-140	60-140
Recovery standard		
$^{13}C_{12}$-PCB-81	50-200	50-200

* Unstable analyte, included for general information only.

[1] Interim laboratory background level acceptance limit is 25 pg/mL for a 4 mL sample (i.e.,100 pg abs.)

[2] Method recovery acceptance limits are not fully developed; the values provided are interim acceptance criteria. Results outside of the values shown may be accepted based on professional judgement.

QC Specification Table: Other parameters

QC Parameter	Specification
Instrument Sensitivity	Daily, S:N ≥ 3:1 for all analytes in the lowest standard used for calibration.
Initial Calibration	Run initially, and as required to maintain calibration verification and instrument sensitivity. Average response factors are used for quantification. RSD must be less than 25% for the native compounds and less than 35% for the labelled compounds.
Continuing Calibration Verification	Run every 12 hrs, quantify against I-CAL. Calculated conc. must be 70-130% of actual. Surrogate recoveries must fall within the limits of the table above.
Instrumental Carryover	Every Initial Calibration, Cal/Ver, or OPR: < 0.3 % carryover into following toluene blank injection.
Duplicate Samples or MS/MSD	If conc. > 5 times R.L., RPD < 40% If conc. < 5 times R.L., difference between pairs < R.L.

I have shipped mouse urine samples from Day 2 through Day 15 (2 sample boxes) per Ricerca protocol number 033244 (Arcadis) by World Courier overnight on dry ice. Please use the attached Sample Transfer record(s) to note receipt of the samples. Also, please let me know if the shipment was received in acceptable condition. **For our records, a copy of the *completed* Sample Transfer record(s) must be sent via email to my attention as soon as possible.**

Thank you in advance for your time. If you have any questions, please feel free to contact Roger Hawks or me.

Best Regards,

Pam Prince 3-30-15

Acceptance Checklist for Dangerous Goods Not Requiring a Shipper's Declaration

2015

AIR CANADA CARGO

Never accept or reject a shipment until all items have been checked. Check the appropriate box on each line.
Please consult a dangerous Goods Acceptance Specialist for interline transfers or if you have any questions.

014-08521149
Air Waybill Number

1 APRIL 2015
Date

General for all Shipments:	YES	NO	N/A
A) Are packages in proper condition for carriage (e.g.: strong outer package free from damage or leakage)?	☑	☐	
B) Are all State and Operator Variations complied with?	☑	☐	☐
C) Does the number of packages, overpacks or ULDs shown on the air waybill agree with the number tendered?	☑	☐	

☐ Dry Ice – when Shipper's Declaration not required (ICE)	YES	NO	N/A
The Air Waybill			
1) Does the "Nature and Quantity of Goods" box indicated?	☑	☐	
a) Commodity being cooled	☑	☐	
b) UN1845	☑	☐	
c) Dry ice or Carbon dioxide, solid	☑	☐	
d) Number of packages (not applicable to ULDs)	☑	☐	☐
e) Net Weight (of Dry ice) in each package or ULD (kg)	☑	☐	☐
The Package			
2) Is the package, overpack or ULD vented?	☑	☐	☐
Marking			
3) Is the package or overpack marked with the following (not applicable if a ULD is tendered containing Dry ice):			
a) UN1845?	☑	☐	☐
b) Dry ice or Carbon dioxide, solid?	☑	☐	☐
c) Full name and address of the Shipper and Consignee?	☑	☐	☐
d) The Net Weight of dry ice contained in each package or overpack?	☑	☐	☐
Labeling			
4) When package dimensions are adequate, is the Class 9 label on the same surface as the words Dry ice (not applicable if a ULD is tendered containing Dry ice)?	☑	☐	☐
5) For AC Cool Chain or Shipper-Loaded ULDs, is an ACF333DG tag properly completed and attached?	☐	☑	☐

The special handling code for Dry ice is ICE and must be entered in WebLynx
If the shipment is acceptable, complete a NOTIFICATION TO CAPTAIN (NOTOC) form (ACF295K)

☐ Biological Substance, Category B UN3373 (RDS)	YES	NO	N/A
The Air Waybill			
1) Does the "Nature and Quantity of Goods" box indicate?			
a) UN3373	☐	☐	
b) The test: "Biological Substance, Category B"	☐	☐	
Package Marking and Labeling			
2) Is the package marked with:			
a) UN3373 (including prefix) inside a diamond mark?	☐	☐	
b) Biological Substance, Category B?	☐	☐	
c) Full name and address of shipper and consignee?	☐	☐	
3) Is the name and telephone number of a responsible person shown on the air waybill or package?	☐	☐	☐

The special handling code for Biological Substance, Category B is RDS and must be entered in WebLynx.

☐ Radioactive Material in Excepted Package (RRE)	YES	NO	N/A
The Air Waybill			
1) Does the "Nature and Quantity of Goods" box contain?			
a) UN number (UN2908, UN2909 and/or UN2911) and proper shipping name	☐	☐	
b) Number of packages	☐	☐	
Package Marking and Labeling			
2) Is the Excepted Package handling label affixed to the package?	☐	☐	
3) Is the UN number (preceded by the letters "UN") shown on the handling label?	☐	☐	
4) Is the full name and address of the shipper and consignee marked on the package?	☐	☐	
5) If the package is over 50 kg, is the permissible gross weight indicated?	☐	☐	☐

The special handling code for radioactive materials in excepted packages is RRE and must be entered in WebLynx.

General for all Shipments:	YES	NO	N/A
D) All embargoes and restrictions not published in the Regulations checked and complied with?	☑	☐	☐
E) All irrelevant labels and marks removed from the package?	☐	☐	☑

☐ Excepted Lithium batteries (ELI and ELM)	YES	NO	N/A
The Air Waybill			
1) Are the words "Lithium ion batteries" (or "Lithium metal batteries") in compliance with Section II of PI 965 (PI 966, PI 967, PI 969 or PI 970) shown in the "Nature and Quantity of Goods" box?	☐	☐	
2) Does the air waybill or other document, indicate the required information (see PI 965, PI 966, PI 967, PI 969 or PI 970)?	☐	☐	☐
3) Are packages containing Lithium batteries shown separately from packages of non-dangerous goods?	☐	☐	☐
Package Marking and Labeling			
4) Is the shipment being tendered in a shipper Loaded Unit (SLULD)? If yes, skip questions 5 – 7	☐	☐	☐
5) Is the package labeled with Lithium battery handling label?	☐	☐	☐
6) Is the label marked with either "Lithium ion battery and/or Lithium metal battery"?	☐	☐	☐
7) Is a telephone number shown on the label?	☐	☐	☐
Overpack Marking and Labeling			
8) If an Overpack is used, is the package marked with the work OVERPACK?	☐	☐	☐
9) Is the Overpack labeled with the Lithium battery handling label if those on the packages are not visible?	☐	☐	☐

The special handling code for Lithium Ion batteries is ELI.
The special handling code for Lithium Metal Batteries is ELM.
Either ELI or ELM must be entered in WebLynx.
Air Canada will NOT accept Lithium Metal or Lithium Alloy Cells and Batteries for transport. UN3090, Class 9, PI 968.
This includes all Section IA, IB and Section II Cells and Batteries

☐ Dangerous Goods in Excepted Quantity (REQ)	YES	NO	N/A
The Air Waybill			
1) Are the words "Dangerous Goods in Excepted Quantities" indicated in the Nature and Quantity of Goods box?	☐	☐	
2) Is the number of packages shown in the Nature and Quantity of Goods box?	☐	☐	
Marking			
3) Is the Excepted Quantities mark shown on the package?	☐	☐	
4) Is the primary hazard class or division number of the dangerous goods show on the mark?	☐	☐	
5) Is the name of the shipper or consignee shown on the mark, if not shown elsewhere on the package?	☐	☐	☐

The special handling code for dangerous goods in excepted quantities is REQ and must be entered in WebLynx.

NOTICE CONCERNING CARRIERS' LIMITATION OF LIABILITY

If the carriage involves an ultimate destination or stop in a country other than the country of departure, the Warsaw Convention or the Montreal Convention may be applicable and in most cases limit the liability of the Carrier in respect of loss of, damage or delay to cargo. Depending on the applicable regime, and unless a higher value is declared, liability of the Carrier may be limited to 19 Special Drawing Rights per kilogram under the Montreal Convention; 17 Special Drawing Rights per kilogram under the Warsaw Convention as amended by Montreal Protocol No. 4; or 250 French gold francs per kilogram under the Warsaw Convention (unamended by Montreal Protocol No. 4), converted into national currency under applicable law, unless a greater amount is specified in the Carrier's conditions of carriage.

CONDITIONS OF CONTRACT

1. In this contract and the Notices appearing hereon:
CARRIER includes the air carrier issuing this air waybill and all carriers that carry or undertake to carry the cargo or perform any other services related to such carriage.
SPECIAL DRAWING RIGHT (SDR) is a Special Drawing Right as defined by the International Monetary Fund.
WARSAW CONVENTION means whichever of the following instruments is applicable to the contract of carriage:
the Convention for the Unification of Certain Rules Relating to International Carriage by Air, signed at Warsaw, 12 October 1929;
that Convention as amended at The Hague on 28 September 1955;
that Convention as amended at The Hague 1955 and by Montreal Protocol No. 1, 2, or 4 (1975) as the case may be.
MONTREAL CONVENTION means the Convention for the Unification of Certain Rules for International Carriage by Air, done at Montreal on 28 May 1999.

2.
2.1 Carriage is subject to the rules relating to liability established by the Warsaw Convention or the Montreal Convention unless such carriage is not "international carriage" as defined by the applicable Conventions.
2.2 To the extent not in conflict with the foregoing, carriage and other related services performed by each Carrier are subject to:
2.2.1 applicable laws and government regulations;
2.2.2 provisions contained in the air waybill, Carrier's conditions of carriage and related rules, regulations, and timetables (but not the times of departure and arrival stated therein) and applicable tariffs of such Carrier, which are made part hereof, and which may be inspected at any airports or other cargo sales offices from which it operates regular services. When carriage is to/from the USA, the shipper and the consignee are entitled, upon request, to receive a free copy of the Carrier's conditions of carriage. The Carrier's conditions of carriage include, but are not limited to:
2.2.2.1 limits on the Carrier's liability for loss, damage or delay of goods, including fragile or perishable goods;
2.2.2.2 claims restrictions, including time periods within which shippers or consignees must file a claim or bring an action against the Carrier for its acts or omissions, or those of its agents;
2.2.2.3 rights, if any, of the Carrier to change the terms of the contract;
2.2.2.4 rules about Carrier's right to refuse to carry;
2.2.2.5 rights of the Carrier and limitations concerning delay or failure to perform service, including schedule changes, substitution of alternate Carrier or aircraft and rerouting.

3. The agreed stopping places (which may be altered by Carrier in case of necessity) are those places, except the place of departure and place of destination, set forth on the face hereof or shown in Carrier's timetables as scheduled stopping places for the route. Carriage to be performed hereunder by several successive Carriers is regarded as a single operation.

4. For carriage to which the Montreal Convention does not apply, Carrier's liability limitation shall not be less than the per kilogram monetary limit set out in any applicable Convention or in Carrier's tariffs or general conditions of carriage for cargo lost, damaged or delayed, provided that any such limitation of liability in an amount less than 19 SDRs per kilogram will not apply for carriage to or from the United States.

5.
5.1 Except when the Carrier has extended credit to the consignee without the written consent of the shipper, the shipper guarantees payment of all charges for the carriage due in accordance with Carrier's tariff, conditions of carriage and related regulations, applicable laws (including national laws implementing the Warsaw Convention and the Montreal Convention), government regulations, orders and requirements.
5.2 When no part of the consignment is delivered, a claim with respect to such consignment will be considered even though transportation charges thereon are unpaid.

6.
6.1 For cargo accepted for carriage, the Warsaw Convention and the Montreal Convention permit shipper to increase the limitation of liability by declaring a higher value for carriage and paying a supplemental charge if required.
6.2 In carriage to which neither the Warsaw Convention nor the Montreal Convention applies Carrier shall, in accordance with the procedures set forth in its general conditions of carriage and applicable tariffs, permit shipper to increase the limitation of liability by declaring a higher value for carriage and paying a supplemental charge if so required.

7.
7.1 In cases of loss of, damage or delay to part of the cargo, the weight to be taken into account in determining Carrier's limit of liability shall be only the weight of the package or packages concerned.
7.2 Notwithstanding any other provisions, for "foreign air transportation" as defined by the U.S. Transportation Code:
7.2.1 in the case of loss of, damage or delay to a shipment, the weight to be used in determining Carrier's limit of liability shall be the weight which is used to determine the charge for carriage of such shipment; and
7.2.2 in the case of loss of, damage or delay to a part of a shipment, the shipment weight in 7.2.1 shall be prorated to the packages covered by the same air waybill whose value is affected by the loss, damage or delay. The weight applicable in the case of loss or damage to one or more articles in a package shall be the weight of the entire package.

8. Any exclusion or limitation of liability applicable to Carrier shall apply to Carrier's agents, employees, and representatives and to any person whose aircraft or equipment is used by Carrier for carriage and such person's agents, employees and representatives.

9. Carrier undertakes to complete the carriage with reasonable dispatch. Where permitted by applicable laws, tariffs and government regulations, Carrier may use alternative carriers, aircraft or modes of transport without notice but with due regard to the interests of the shipper. Carrier is authorised by the shipper to select the routing and all intermediate stopping places that it deems appropriate or to change or deviate from the routing shown on the face hereof.

10. Receipt by the person entitled to delivery of the cargo without complaint shall be prima facie evidence that the cargo has been delivered in good condition and in accordance with the contract of carriage.
10.1 In the case of loss of, damage or delay to cargo a written complaint must be made to Carrier by the person entitled to delivery. Such complaint must be made:
10.1.1 in the case of damage to the cargo, immediately after discovery of the damage and at the latest within 14 days from the date of receipt of the cargo;
10.1.2 in the case of delay, within 21 days from the date on which the cargo was placed at the disposal of the person entitled to delivery.
10.1.3 in the case of non-delivery of the cargo, within 120 days from the date of issue of the air waybill, or if an air waybill has not been issued, within 120 days from the date of receipt of the cargo for transportation by the Carrier.
10.2 Such complaint may be made to the Carrier whose air waybill was used, or to the first Carrier or to the last Carrier or to the Carrier, which performed the carriage during which the loss, damage or delay took place.
10.3 Unless a written complaint is made within the time limits specified in 10.1 no action may be brought against Carrier.
10.4 Any rights to damages against Carrier shall be extinguished unless an action is brought within two years from the date of arrival at the destination, or from the date on which the aircraft ought to have arrived, or from the date on which the carriage stopped.

11. Shipper shall comply with all applicable laws and government regulations of any country to or from which the cargo may be carried, including those relating to the packing, carriage or delivery of the cargo, and shall furnish such information and attach such documents to the air waybill as may be necessary to comply with such laws and regulations. Carrier is not liable to shipper and shipper shall indemnify Carrier for loss or expense due to shipper's failure to comply with this provision.

12. No agent, employee or representative of Carrier has authority to alter, modify or waive any provisions of this contract.

NOTICE CONCERNING CARRIERS' LIMITATION OF LIABILITY

If the carriage involves an ultimate destination or stop in a country other than the country of departure, the Warsaw Convention or the Montreal Convention may be applicable and in most cases limit the liability of the Carrier in respect of loss of, damage or delay to cargo. Depending on the applicable regime, and unless a higher value is declared, liability of the Carrier may be limited to 19 Special Drawing Rights per kilogram under the Montreal Convention; 17 Special Drawing Rights per kilogram under the Warsaw Convention as amended by Montreal Protocol No. 4; or 250 French gold francs per kilogram under the Warsaw Convention (unamended by Montreal Protocol No. 4), converted into national currency under applicable law, unless a greater amount is specified in the Carrier's conditions of carriage.

CONDITIONS OF CONTRACT

1. In this contract and the Notices appearing hereon:
CARRIER includes the air carrier issuing this air waybill and all carriers that carry or undertake to carry the cargo or perform any other services related to such carriage.
SPECIAL DRAWING RIGHT (SDR) is a Special Drawing Right as defined by the International Monetary Fund.
WARSAW CONVENTION means whichever of the following instruments is applicable to the contract of carriage:
the Convention for the Unification of Certain Rules Relating to International Carriage by Air, signed at Warsaw, 12 October 1929;
that Convention as amended at The Hague on 28 September 1955;
that Convention as amended at The Hague 1955 and by Montreal Protocol No. 1, 2, or 4 (1975) as the case may be.
MONTREAL CONVENTION means the Convention for the Unification of Certain Rules for International Carriage by Air, done at Montreal on 28 May 1999.

2.
2.1 Carriage is subject to the rules relating to liability established by the Warsaw Convention or the Montreal Convention unless such carriage is not "international carriage" as defined by the applicable Conventions.
2.2 To the extent not in conflict with the foregoing, carriage and other related services performed by each Carrier are subject to:
2.2.1 applicable laws and government regulations;
2.2.2 provisions contained in the air waybill, Carrier's conditions of carriage and related rules, regulations, and timetables (but not the times of departure and arrival stated therein) and applicable tariffs of such Carrier, which are made part hereof, and which may be inspected at any airports or other cargo sales offices from which it operates regular services. When carriage is to/from the USA, the shipper and the consignee are entitled, upon request, to receive a free copy of the Carrier's conditions of carriage. The Carrier's conditions of carriage include, but are not limited to:
2.2.2.1 limits on the Carrier's liability for loss, damage or delay of goods, including fragile or perishable goods;
2.2.2.2 claims restrictions, including time periods within which shippers or consignees must file a claim or bring an action against the Carrier for its acts or omissions, or those of its agents;
2.2.2.3 rights, if any, of the Carrier to change the terms of the contract;
2.2.2.4 rules about Carrier's right to refuse to carry;
2.2.2.5 rights of the Carrier and limitations concerning delay or failure to perform service, including schedule changes, substitution of alternate Carrier or aircraft and rerouting.

3. The agreed stopping places (which may be altered by Carrier in case of necessity) are those places, except the place of departure and place of destination, set forth on the face hereof or shown in Carrier's timetables as scheduled stopping places for the route. Carriage to be performed hereunder by several successive Carriers is regarded as a single operation.

4. For carriage to which the Montreal Convention does not apply, Carrier's liability limitation shall not be less than the per kilogram monetary limit set out in any applicable Convention or in Carrier's tariffs or general conditions of carriage for cargo lost, damaged or delayed, provided that any such limitation of liability in an amount less than 19 SDRs per kilogram will not apply for carriage to or from the United States.

5.
5.1 Except when the Carrier has extended credit to the consignee without the written consent of the shipper, the shipper guarantees payment of all charges for the carriage due in accordance with Carrier's tariff, conditions of carriage and related regulations, applicable laws (including national laws implementing the Warsaw Convention and the Montreal Convention), government regulations, orders and requirements.
5.2 When no part of the consignment is delivered, a claim with respect to such consignment will be considered even though transportation charges thereon are unpaid.

6.
6.1 For cargo accepted for carriage, the Warsaw Convention and the Montreal Convention permit shipper to increase the limitation of liability by declaring a higher value for carriage and paying a supplemental charge if required.
6.2 In carriage to which neither the Warsaw Convention nor the Montreal Convention applies Carrier shall, in accordance with the procedures set forth in its general conditions of carriage and applicable tariffs, permit shipper to increase the limitation of liability by declaring a higher value for carriage and paying a supplemental charge if so required.

7.
7.1 In cases of loss of, damage or delay to part of the cargo, the weight to be taken into account in determining Carrier's limit of liability shall be only the weight of the package or packages concerned.
7.2 Notwithstanding any other provisions, for "foreign air transportation" as defined by the U.S. Transportation Code:
7.2.1 in the case of loss of, damage or delay to a shipment, the weight to be used in determining Carrier's limit of liability shall be the weight which is used to determine the charge for carriage of such shipment; and
7.2.2 in the case of loss of, damage or delay to a part of a shipment, the shipment weight in 7.2.1 shall be prorated to the packages covered by the same air waybill whose value is affected by the loss, damage or delay. The weight applicable in the case of loss or damage to one or more articles in a package shall be the weight of the entire package.

8. Any exclusion or limitation of liability applicable to Carrier shall apply to Carrier's agents, employees, and representatives and to any person whose aircraft or equipment is used by Carrier for carriage and such person's agents, employees and representatives.

9. Carrier undertakes to complete the carriage with reasonable dispatch. Where permitted by applicable laws, tariffs and government regulations, Carrier may use alternative carriers, aircraft or modes of transport without notice but with due regard to the interests of the shipper. Carrier is authorised by the shipper to select the routing and all intermediate stopping places that it deems appropriate or to change or deviate from the routing shown on the face hereof.

10. Receipt by the person entitled to delivery of the cargo without complaint shall be prima facie evidence that the cargo has been delivered in good condition and in accordance with the contract of carriage.
10.1 In the case of loss of, damage or delay to cargo a written complaint must be made to Carrier by the person entitled to delivery. Such complaint must be made:
10.1.1 in the case of damage to the cargo, immediately after discovery of the damage and at the latest within 14 days from the date of receipt of the cargo;
10.1.2 in the case of delay, within 21 days from the date on which the cargo was placed at the disposal of the person entitled to delivery.
10.1.3 in the case of non-delivery of the cargo, within 120 days from the date of issue of the air waybill, or if an air waybill has not been issued, within 120 days from the date of receipt of the cargo for transportation by the Carrier.
10.2 Such complaint may be made to the Carrier whose air waybill was used, or to the first Carrier or to the last Carrier or to the Carrier, which performed the carriage during which the loss, damage or delay took place.
10.3 Unless a written complaint is made within the time limits specified in 10.1 no action may be brought against Carrier.
10.4 Any rights to damages against Carrier shall be extinguished unless an action is brought within two years from the date of arrival at the destination, or from the date on which the aircraft ought to have arrived, or from the date on which the carriage stopped.

11. Shipper shall comply with all applicable laws and government regulations of any country to or from which the cargo may be carried, including those relating to the packing, carriage or delivery of the cargo, and shall furnish such information and attach such documents to the air waybill as may be necessary to comply with such laws and regulations. Carrier is not liable to shipper and shipper shall indemnify Carrier for loss or expense due to shipper's failure to comply with this provision.

12. No agent, employee or representative of Carrier has authority to alter, modify or waive any provisions of this contract.

(1)

I have shipped samples collected from Day 2 through Day 15 (10 urine sample boxes) per Ricerca protocol 031705 (Arcadis, U.S., Inc.) overnight on dry ice.

Please draw your attention to the attached memo clarifying an error in collection interval days noted on the sample collection tubes.

Please use the attached Sample Transfer records to note receipt of the samples. Also, please let me know if the shipment was received in acceptable condition. **For our records, a copy of the *completed* Sample Transfer record(s) must be sent or emailed to my attention as soon as possible.**

Thank you in advance for your time. If you have any questions, please feel free to contact Dr. Roger Hawks or myself.

Best Regards,

5.26.15

RE: Interval of collection noted on sample storage tube

It was noted following the Day 5 sample collection that the technician collecting samples had inadvertently collected the Day 4 through the Day 7 samples into the incorrect "Day Interval" labeled storage tubes. Documentation was made on the Sample Transfer record to note the discrepancies and the Study Director was notified. Since the incorrect interval tubes were used for Day 4 though Day 7, the remaining intervals for Day 12 through Day 15, were collected and stored in the remaining unused storage tubes which then had the incorrect interval noted.

Please refer to the below chart noting the tube label discrepancies.

We apologize for the error and for the inconvenience on the receiving end.

Actual Interval of collection	Storage tube labeled
Day 4	Day 14
Day 5	Day 12
Day 6	Day 15
Day 7	Day 13
Day 12	Day 4
Day 13	Day 6
Day 14	Day 7
Day 15	Day 5

RE: Pooled animal number information

Per protocol, samples will be pooled from 2 subgroups per group. The individual animal IDs per pooled sample ID are listed on the attached spreadsheet.

RE: Date on sample labels

Note: due to the study start delay, all pre-labeled sample tubes will have an incorrect collection date noted. The correct date will be 18 days post the label date.

Example: Day 2 label notes 4-25-15 collection date, actual collection date is 5-13-15

Biohazard Type:	Human Biohazard

Comments:

Sample size - 4mL. Please document sample sizes in volumes and weight

Sample vials are presently being stored in the -80°C. They should be brought into the WIC the day before extraction to ensure that they do not stay too long at temps above 0 °C.

• Conduct all aspects of the sample preparation at low light and minimize exposure of the samples and extracts to light.

| 40UL MP035A-STK/ must be added to BLK as well as to the SPM

Please prepare a new linearity to run with the samples.

Calibration: | MP004-CAL/

LABELED COMPOUND	CAS NO.	LAB FLAG [1]	m/e ION CHANNELS	ION ABUND. RATIO	QC LIMITS	CONC. FOUND (ng/mL)	CONC. RANGE (ng/mL)
13C6-3-OH-Chrysene			322/307	2.03	1.32-2.74	258	126-379
13C6-1-OH-Benz[a]anthracene			322/307	2.42	1.57-3.27	267	126-378
d11-3-OH-Benzo[a]pyrene			351/336	6.37	4.14-8.60	281	49.8-299

(1) Where applicable, custom lab flags have been used on this report.

These data are validated and reported as accurate and in accord with AXYS Analytical Services Ltd. ISO17025 compliant quality assurance processes.

OH-PAHs ANALYSIS
AXYS METHOD: MLA-905
4765: L23367-11 to -24
L23368-1 to -5

20 August 2015

NARRATIVE

This narrative describes the analysis of nineteen urine samples for selected hydroxy metabolites of poly aromatic hydrocarbons (PAHs) using high-resolution gas chromatography / high-resolution mass spectrometry (HRGC / HRMS).

SAMPLE RECEIPT and STORAGE

The samples were received on the 29th May 2015. Details of sample conditions on receipt are provided on the sample receiving record. As per instructions from ARCADIS: Day 7 urine sample for each test group was combined with the Day 8 urine sample for each test group. The combined urine samples were assigned AXYS ID L23367-1 to -24. Similarly, Day 14 urine sample for each test group was also combined with the Day 15 urine sample for each test group. The combined urine samples were assigned AXYS ID L23368-1 to -24. Sample compositing was conducted in workgroup WG51568 details of sample compositing are recorded on Composite Sample Preparation Record worksheets.

SAMPLE PREPARATION AND ANALYSIS

Analysis procedures were in general accordance with '**AXYS Method 905 Rev 01: *Analytical Procedure for the Analysis of Hydroxy-Polycyclic Aromatic Hydrocarbons in Urine by HRCG-HRMS.*** A method summary (MSU-905) is included in the data package following this narrative.

The samples were analyzed in batch WG51828, the composition of which is shown on the correlation table, and on the batch list heading the extraction workup sheets. The analysis batch included a procedural blank, (AXYS ID WG51828-101) prepared with synthetic urine and an Ongoing Precision and Recovery (OPRs) test sample (AXYS ID WG51828-102) prepared with spiked human urine.

An accurately measured sub-sample of approximately 4 mL sample was spiked with 30 µL of 2-mercaptoethanol to control analyte oxidation. The samples were then spiked with isotopically labeled quantification standards and β-glucuronidase enzyme. The mixture was incubated at 37°C for 17 hrs. The de-conjugated analytes were then extracted with pentane. The extracts were reduced under a gentle stream of nitrogen, spiked with the derivatization monitoring standard and the recovery standard and derivatized for 30 min with MSTFA at 60°C. The final extract volume was 225 µL, 2 µL was injected onto the HRGC/HRMS.

CALCULATIONS

Target concentrations were determined by isotope dilution or internal standard quantification procedures, using OPUSQuan software. Formulas used for conversion of the raw chromatographic data to concentrations are provided in the method summary document, MSU-905.

As described in the method summary, sample specific detection limits (SDLs) were calculated from the noise for each target analyte and used as the detection qualifier. If the OPUSquan software selected an unrepresentative region of noise for the SDL calculation, the SDL is corrected by hand on the raw data.

REPORTING CONVENTIONS

For internal tracking, ARCADIS U.S., INC., was assigned contract number 4765. AXYS logged the samples under the unique laboratory identifier of the form identifier of the form LXXXXX-XX All data reports reference both the client and lab sample identifiers.

Any extra work required and performed after the initial instrumental analysis of a sample extract is given an extra "test suffix" code. The single letter code per extra work performed is added to the AXYS sample ID as a suffix, and is combined with any other applicable test suffix codes. Test code in this data package includes:

i = Instrumental reanalysis of the sample extract
W = The sample extract was diluted and instrumentally reanalyzed
N = large dilution, new portion into fresh microvial followed by instrumental analysis
L = re-derivatization of sample extract was conducted following initial analysis

The laboratory qualifiers used are as follows:

D	=	indicates dilution data
K	=	peak detected but did not meet quantification criteria, result reported represents the estimated maximum possible concentration
U	=	Analyte not detected
V	=	the recovery of the surrogate falls outside the method control limits

Results are reported to three significant figures, in units of picograms per milliliter (pg/mL).

ANALYTICAL DISCUSSION

Initial analysis results for the following samples did not meet all the method's specifications. The sample extracts were instrumentally reanalyzed and results were reported from the reanalysis data. This is indicated on the report forms by suffix 'i' added to the AXYS ID.

AXYS ID	Client ID
L23367-14	702 Day 7/8
L23367-15	801 Day 7/8
L23367-21	1101 Day 7/8
L23367-22	1102 Day 7/8
L23367-23	1201 Day 7/8
L23367-24	1202 Day 7/8
L23368-1	101 Day 14/15
Lab Blank	WG51828-101
OPR	WG51828-102

Area responses that were above the method's calibration range were observed in the following samples for 3-OH-Benzo[a]pyrene. The sample extracts were diluted to bring the area response within the calibration limit and results for this analyte were separately reported from the diluted extract analysis data.

AXYS ID	Client ID
L23368-3	201 Day 14/15
L23367-4	202 Day 14/15
L23367-17	901 Day 7/8
L23367-18	902 Day 7/8

The derivatization control standard indicated incomplete derivatization in two sample extracts namely: 102 Day 14/15 and 701 Day 7/8 (AXYS ID L23367-2 and -13 respectively). These sample extracts were re-derivatized and instrumentally reanalyzed. Derivatization went into completion as indicated by complete recovery of the derivatization control standard. Final results were reported from the re-derivatized extract analysis data.

Due to a software limitation, data points for all the initial calibration runs could not be included on the HTML reports. As a result the mean RRF values shown on the report forms are slightly different from the mean values shown on the raw data under the Analysis Chromatographic section. For all calculations, please use average RRF values shown on the Analysis Chromatography section of the data package.

QA/QC NOTES

The QC samples were prepared alongside the client sample, and were subjected to the same analytical procedures. The sample results were evaluated in comparison to the QC samples.

- The results are not blank corrected. The sample data should be compared to the procedural blank.
- By virtue of the isotope dilution/internal standard quantification procedures, data are recovery corrected for possible losses during extraction and cleanup.
- All linearity, CAL/VER, Lab Blank, OPR and labeled compound recovery specifications were met, with the following exception:

Due to matrix co-extractives detection limits significantly above 25 pg/mL were observed in multiple samples.

Surrogate recoveries for one or more labeled compounds were observed to be slightly outside the method's interim control limits for samples shown in the table below. The affected surrogates are flagged with a 'V' on the reports. This has no impact on the data. The results are recovery-corrected, labeled compound recovery values are provided as general data quality indicators only.

AXYS ID	Client ID
L23368-2	102 Day 14/15
L23368-3	201 Day 14/15
L23368-4	202 Day 14/15
L23367-13	701 Day 7/8
L23367-14	702 Day 7/8
L23367-21	1101 Day 7/8
L23367-22	1102 Day 7/8
Lab Blank	WG51828-101

Percent recovery value for 13C6-3-OH-Chrysene was marginally below the method control limit in the Ongoing Precision and Recovery (OPR) test sample (AXYS ID WG51611-102). However, quantitative recovery of all the native analytes in this QC sample demonstrated that data are not affected by this variance.

Percent recovery value for d11-3-OH-Benzo[a]pyrene was marginally above the method's control limit in sample Day 7 Group 3 (AXYS ID L22965-23). This has no impact on the data. The results are recovery-corrected, labeled compound recovery values are provided as general data quality indicators only.

DATA PACKAGE

- Method summary, MSU-905
- Sample Correlation Table
- Sample Receiving Documentation
- Composite Sample Preparation Records
- Extraction worksheets.
- Sample data reports (Analysis Reports)
- Laboratory QC data reports
- Instrumental QC data reports (organized by analysis date)
- Sample raw data (Analysis chromatography)
- Laboratory QC raw data
- Instrumental QC raw data (organized by analysis date).

I certify that this data package complies with the terms and conditions of the contract, both technically and for completeness, except for the conditions detailed above. In addition, I certify, that to the best of my knowledge and belief, the data as reported are true and accurate. The following signature, on behalf of Axys Analytical Services Ltd, authorizes the release of the data contained in this data package.

Summary of AXYS method MLA-905 Rev. 01 Ver. 02:

ANALYTICAL PROCEDURE FOR THE ANALYSIS OF HYDROXY-POLYCYCLIC AROMATIC HYDROCARBONS IN URINE BY HRGC-HRMS

AXYS Method MLA-905 describes the determination of concentrations of selected hydroxy-polyaromatic hydrocarbons (OH-PAHs) in urine samples. According to clients' requests this analysis may be performed to determine total OH-PAHs (the sum of free OH-PAHs and conjugated OH-PAHs) and/or only free (not conjugated) OH-PAHs. Deconjugation is performed by enzymatic hydrolysis to liberate the glucuronated and sulfonated forms of the analytes into free hydroxy PAH forms.

Typical reporting limits are 10 - 25 pg /mL for each analyte using a 4 mL sample.

TARGET ANALYTES

Hydroxy polycyclic aromatic hydrocarbons (OH-PAHs)

Compound	Short name	CAS #
3-Hydroxy-chrysene	3-OH-Chrysene	63019-39-6
3-Hydroxy-benzo[a]pyrene	3-OH-Benzo[a]pyrene	13345-21-6
9-Hydroxy-benzo[a]pyrene	9-OH-Benzo[a]pyrene	17573-21-6
3-Hydroxy-benz[a]anthracene	3-OH-Benz[a]anthracene	4834-35-9
7,8-Dihydrodiol-benzo[a]pyrene (trans) *	7,8-Diol-benzo[a]pyrene, trans	60864-95-1
7,8-Dihydrodiol-benzo[a]pyrene (cis) *	7,8-Diol-benzo[a]pyrene, cis	60657-25-2

* Poorly recovered analyte, included for general information only

EXTRACTION

Urine samples are spiked with 2-mercaptoethanol to prevent oxidation of the analytes. The samples are then spiked with a suite of labeled quantification standards and labeled derivatization monitoring standard. Where total OH-PAHs (the sum of free OH-PAHs and conjugated OH-PAHs) are required β-glucuronidase enzyme is used to de-conjugate the glucuronated and sulfonated forms of the analytes into free hydroxy PAH forms. The samples are then sequentially extracted with pentane. The extracts are dried with anhydrous sodium sulphate, concentrated and derivatized to trimethylsilyl forms with N-Methyl-N-(trimethylsilyl) trifluoroacetamide.

INSTRUMENTAL ANALYSIS

Instrumental analysis is performed by high-resolution gas chromatography using a 30 m DB-17 capillary column and detection by high resolution mass spectrometry.

Analytes, Typical Retention Times, Acquired Ions and Quantification References

CALIBRATION

Initial calibration is performed using a five point calibration series of solutions that encompass the working concentration range. The derivatized initial calibration solutions contain authentic target OH-PAHs, deconjugation monitoring standards, and ^{13}C-labelled or deuterium labelled derivatization monitoring, surrogate and recovery standards. The concentrations of the authentic target compounds in the solutions vary to encompass the working range of the instrument, while the concentrations of the other compounds are constant. Calibration procedures use the mean RRFs determined from the initial calibration to calculate analyte concentrations. Calibration is verified at least once every 12 hours by analysis of a mid-level calibration solution.

Nominal Concentrations of Calibration Standard Solutions

Target analyte	CAL A CS-1	CAL B CS-2	CAL C CS-3	CAL D CS-4	CAL E CS-5	CAL F CAL VER CS-6	CAL G CS-7	CAL H CS-8
3-OH-Chrysene	0.25	0.50	1.00	5.00	50	250	500	1000

ANALYTE IDENTIFICATION

An individual chromatographic peak is identified as a target compound if the following criteria are met for the quantification and confirmation ions:

1. Peak responses must be at least three times the background noise level for the quantification mass ion.
2. Each analyte is identified with one quantification and one confirmation mass ion.
3. The relative retention time must be within the window predicted from the initial calibration runs and the surrogate standard retention times.
4. Peak maxima for quantification and confirmation ions must coincide within two seconds.

QUANTIFICATION

Target concentrations are determined by isotope dilution or internal standard quantification procedures using MassLynx software. The equation used in the conversion of the raw chromatograms to concentration is provided below:

$$\text{Sample Conc.} = \left(\frac{\text{area of Target}}{\text{area of Surro}} \times \text{weight of Surro. (ng)}\right) x \left(\frac{1}{RRF_x}\right) x \left(\frac{1}{\text{sample size (mL)}}\right),$$

where RRF_x = Relative Response Factor for the analyte. RRFs are calculated for each analyte according to the following equation:

$$RRF_x = \left(\frac{A_x}{A_{IS}}\right) \times \left(\frac{C_{IS}}{C_x}\right)$$

where: C_{IS} =The concentration of the quantification standard in the calibration standard.
C_x =The concentration of the target analyte in the calibration standard.

Final target concentrations are recovery corrected by this method of quantification.

The recovery of the surrogate standard is calculated (by internal standard quantification against the recovery standard using an average RRF) and monitored as an indication of overall data quality.

$$\text{\% Surrogate recovery} = \left(\frac{\text{area of Surrogate}}{\text{area of Recovery Std}} \times \frac{\text{Weight of Rec. Std}}{\text{Weight of Surro.}}\right) x \left(\frac{100}{RRF}\right)$$

REPORTING CRITERIA

Sample specific detection limits (SDLs) are calculated by TargetLynx software using 3 times the signal of the noise in the target channel converted to an equivalent sample concentration:

$$SDL = \left(\frac{3 \text{ x Height of Noise}}{\text{Height of Surro}} \times \text{weight of Surro (ng)}\right) x \left(\frac{1}{RRF_x}\right) x \left(\frac{1}{\text{sample size (mL)}}\right)$$

SDLs values are used as a detection qualifier. Final concentrations may be reported as picograms per milliliter (pg/mL) or picograms per gram (pg/g). The units to be used for a given project have to be negotiated at the start of every project.

QUALITY ASSURANCE/QUALITY CONTROL

All samples are analyzed in batches with the following composition:

- Batch Size – Each batch consists of test samples and additional QC samples.
- Blanks – Blanks are analyzed with a minimum frequency of 5% of client samples (i.e. each batch of up to 20 client samples contains a procedural blank). A laboratory prepared pooled urine verified for use, e.g., reference urine SC6235 or synthetic urine, is used as the matrix for the laboratory blank. The laboratory blank is also spiked with the de-conjugation monitoring standard.
- Duplicates – Where sufficient sample is available a duplicate sample is normally analyzed with each analysis batch containing greater than six (6) test samples, or as required by contract.
- OPR (Ongoing Precision and Recovery) – OPRs are analyzed with a minimum frequency of 5% of client samples (i.e. each batch of up to 20 client samples contains an OPR.) An aliquot of native standard (typically 10 µL equivalent to 20 ng per analyte) is added to 4 mL of an approved reference urine matrix to prepare the spiked reference sample. The OPR is also spiked with the de-conjugation monitoring standard.
- A Matrix Spike/Matrix Spike Duplicate may be analyzed upon client request.
- Surrogate/Authentic/Recovery (SAR) solution – Standards for OH-PAHs degrade fairly rapidly. As a diagnostic tool of standards stability control SAR must be prepared with each analysis batch and evaluated.

The batch composition may vary according to batch or quality control requirements specified by a client. Each batch is carried through the complete analytical process as a unit. For sample data to be reportable the batch QC data must meet the acceptance criteria.

QC Specification Table: Procedural Blank Levels and OPR Recoveries

Analyte	Procedural Blank Level pg/sample [1]	Acceptable OPR (% Recovery) [2]
3-OH-Chrysene	100	70-130
3-OH-Benzo[a]pyrene	100	70-130
9-OH-Benzo[a]pyrene	100	60-140
3-OH-Benz[a]anthracene	100	70-130
7,8-Diol-benzo[a]pyrene, Cis *	100	N/A
7,8-Diol-benzo[a]pyrene, Trans *	100	N/A
De-conjugation monitoring standards		
1-OH-Naphthalene	100	50-150
1-OH-Pyrene	100	50-150
Surrogate standards		
$^{13}C_6$-3-OH-Chrysene	50-150	50-150
$^{13}C_6$-1-OH-Benz[a]anthracene	50-150	50-150
d_{11}-3-OH-Benzo[a]pyrene	20-120	20-120
$^{13}C_6$-1-OH-Naphthalene	20-120	20-120
$^{13}C_6$-1-OH-Pyrene	20-120	20-120
Derivatization monitoring standard		
$^{13}C_{12}$-4'-OH-3,3',4,5'-TetraCB	60-140	60-140
Recovery standard		
$^{13}C_{12}$-PCB-81	50-200	50-200

* Unstable analyte, included for general information only.

[1] Interim laboratory background level acceptance limit is 25 pg/mL for a 4 mL sample (i.e.,100 pg abs.)

[2] Method recovery acceptance limits are not fully developed; the values provided are interim acceptance criteria. Results outside of the values shown may be accepted based on professional judgement.

QC Specification Table: Other parameters

QC Parameter	Specification
Instrument Sensitivity	Daily, S:N ≥ 3:1 for all analytes in the lowest standard used for calibration.
Initial Calibration	Run initially, and as required to maintain calibration verification and instrument sensitivity. Average response factors are used for quantification. RSD must be less than 25% for the native compounds and less than 35% for the labelled compounds.
Continuing Calibration Verification	Run every 12 hrs, quantify against I-CAL. Calculated conc. must be 70-130% of actual. Surrogate recoveries must fall within the limits of the table above.
Instrumental Carryover	Every Initial Calibration, Cal/Ver, or OPR: < 0.3 % carryover into following toluene blank injection.
Duplicate Samples or MS/MSD	If conc. > 5 times R.L., RPD < 40% If conc. < 5 times R.L., difference between pairs < R.L.

PLEASE SEE REVERSE SIDE FOR SUMMARY CONDITIONS OF CARRIAGE. By tendering this shipment to World Courier, shipper agrees to the Conditions described therein. **WORLD COURIER'S LIABILITY IS LIMITED.** Liability for loss, damage, or delay of this shipment is limited to the greater of 19 Special Drawing Rights per kilogram of this shipment or US$150. This shipment may also be subject to the liability limitations established by the Montreal Convention and other international conventions. Liability may be increased if shipper states in this waybill a declared value for carriage higher than the liability limitations that would otherwise apply and pays the surcharge quoted by World Courier. Under no circumstances shall World Courier be liable for special, punitive, consequential, indirect, or incidental damages or losses. AS PER TSA REGULATIONS SHIPPER AGREES TO THE INSPECTION OF THIS SHIPMENT. PLEASE SEE REVERSE SIDE FOR CONDITIONS OF CARRIAGE.

WARNING: These commodities, technology or software were exported from the United States in accordance with the Export Administration Regulations. Diversion contrary to U.S. Law prohibited.

(1)

I have shipped samples collected from Day 2 through Day 15 (10 urine sample boxes) per Ricerca protocol 031705 (Arcadis, U.S., Inc.) overnight on dry ice.

Please draw your attention to the attached memo clarifying an error in collection interval days noted on the sample collection tubes.

Please use the attached Sample Transfer records to note receipt of the samples. Also, please let me know if the shipment was received in acceptable condition. **For our records, a copy of the *completed* Sample Transfer record(s) must be sent or emailed to my attention as soon as possible.**

Thank you in advance for your time. If you have any questions, please feel free to contact Dr. Roger Hawks or myself.

Best Regards,

5.26.15

Stacy L. Martz

RE: Interval of collection noted on sample storage tube

It was noted following the Day 5 sample collection that the technician collecting samples had inadvertently collected the Day 4 through the Day 7 samples into the incorrect "Day Interval" labeled storage tubes. Documentation was made on the Sample Transfer record to note the discrepancies and the Study Director was notified. Since the incorrect interval tubes were used for Day 4 though Day 7, the remaining intervals for Day 12 through Day 15, were collected and stored in the remaining unused storage tubes which then had the incorrect interval noted.

Please refer to the below chart noting the tube label discrepancies.

We apologize for the error and for the inconvenience on the receiving end.

Actual Interval of collection	Storage tube labeled
Day 4	Day 14
Day 5	Day 12
Day 6	Day 15
Day 7	Day 13
Day 12	Day 4
Day 13	Day 6
Day 14	Day 7
Day 15	Day 5

RE: Date on sample labels

Note: due to the study start delay, all pre-labeled sample tubes will have an incorrect collection date noted. The correct date will be 18 days post the label date.

Example: Day 2 label notes 4-25-15 collection date, actual collection date is 5-13-15

Biohazard Type:	Human Biohazard

Comments:

Sample size - 4mL. Please document sample sizes in volumes and weight

Sample vials are presently being stored in the -80°C. They should be brought into the WIC the day before extraction to ensure that they do not stay too long at temps above 0 °C.

• Conduct all aspects of the sample preparation at low light and minimize exposure of the samples and extracts to light.

The old enzyme is fine; no need to use the fresh batch but either is fine

The new deconjugation standard, MP035A-STK/01, is better and should be used instead of old one.

| 40UL MP035A-STK/ must be added to BLK as well as to the SPM

Please prepare a new linearity to run with the samples.

Calibration: | MP004-CAL/ WG51568_D2
