Re: Underground storage tanks at the
Laredo International Airport

Dear Mr. Sturgis:

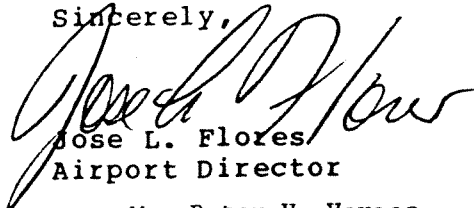

I am pleased to report that the vapor monitoring points to our underground storage tanks at the Laredo International Airport were installed by Environmental Associates, Inc., Leak-Tec Corporation on March 5, 1990.

Monitoring results will be provided to your office as soon as these are made available to the City.

Regarding four inactive underground storage tanks at the Airport, the City of Laredo requests an extension of 120 days to submit a notice of construction. The request is made because the City was contacted by Mr. Randy Niebuhr with the Army Corps of Engineers, Defense Environmental Restoration Program out of Fort Worth, Texas. Mr. Niebuhr will conduct a site inspection of the Airport, formerly an air force base, during the next 30 to 60 days. The Defense Environmental Restoration Program provides for the environmental restoration of former Department of Defense fuel systems and landfills.

Thank you for your assistance and consideration to our request.

Sincerely,

Jose L. Flores
Airport Director
